

The coupon marketplace for local business in Uzbekistan

One marketplace that collects every offer nearby.

New customer discovery and acquisition for local business.

THE PROBLEM

Promotions happen every day. Nobody can measure them.

For buyers

Offers are scattered across Instagram, Telegram chats and offline banners. There is no single place to find an offer, verify its real terms, buy it and prove the purchase at the counter. Conditions stay unclear until payment.

For small businesses

The standard alternative is an SMM or targeted-ads agency: **\$700–2,500 per month** plus a **\$500–2,000** media budget, paid upfront. It buys impressions, not new customers — and costs the same whether or not a single coupon is ever used.

1.21 million small business entities generate 51.5% of Uzbekistan's GDP — and most of them have no marketing staff and no affordable way to buy measurable demand.

THE SOLUTION

One controlled loop from offer to **redeemed customer**

1

Apply

Merchant applies via web or Telegram bot. No app, no paperwork.

2

Moderate

Our team verifies price, terms and limits. Merchant approves before publication.

3

Buy

Buyer sees real price, discount and expiry — then buys and stores the coupon.

4

Redeem

Staff scans QR or PIN. Locked to that merchant, that location, exactly once.

5

Measure

Sales, redemptions, reviews, refunds and complaints — all recorded.

Access channels: three web applications — buyer, partner, admin — plus a Telegram bot, in a country where Telegram reaches ~25 million monthly users.

A rare combination of reach and headroom

INDICATOR	VALUE
E-commerce volume	\$1.2B in 2024 → \$1.8–2.2B by 2027 (CAGR 41–47%)
E-commerce share of retail	~4–4.6% vs ~22% global average
Internet users	32.7M · 89–94% penetration · 82% mobile
Telegram audience	~25M monthly users · 76–88% national reach
Small business sector	1.21M active entities · 51.5% of GDP
Digital advertising market	\$150–160M (2024) → \$368M by 2028

GLOBAL DIGITAL COUPON
MARKET, ~18% CAGR

Uzbekistan is price-sensitive, mobile-first and young. Promotions are already the dominant marketing mechanic for local business — but they run through unstructured posts with no purchase, verification or measurement layer. sizbiz adds that layer rather than creating a new habit.

The merchant pays only for a customer who showed up

Commission is charged only when a coupon is actually redeemed at the merchant's location. No listing fees. No retainer. No upfront media budget.

	ADS / SMM AGENCY	SIZBIZ
Upfront cost	\$700–2,500/mo + \$500–2,000 media	Zero — free listing after moderation
Pays for	Impressions and clicks	A real customer at the counter
Risk	Fully on the merchant	Shared — we earn only on results
Measurability	Indirect: reach, CTR	Exact: sales, redemptions, repeat buyers
Expertise needed	Marketing staff or agency	None — we prepare the offer card

Competitors stop at the **first step**

- **Full closed loop.** Publication → purchase → QR/PIN redemption → statistics → reviews and refunds. Social networks and classifieds cover only publication.
- **Trust layer by design.** Every offer passes moderation and explicit merchant approval. Complaints, refunds and audit are built into the product, not bolted on.
- **Telegram-native.** Login, notifications and a concierge bot in the channel where the entire country already lives.
- **Anti-fraud by design.** Idempotent sale and redemption ledgers, one payment guaranteed per order, location-bound redemption rights for cashiers.

TECHNOLOGY AND STATUS

Not a prototype. Live in production today.

OFFERS · 6 CATEGORIES

Java 21 · Spring Boot 3.4 · Spring Cloud Gateway · Eureka · PostgreSQL 16 · RabbitMQ · Redis · MinIO ·
React 19 · JWT / Spring Security · Docker · GitHub Actions CI/CD · Prometheus, Grafana, Loki

Honest status: online payments currently run in demo mode. Integration with a local provider — Payme, Click or Uzum — is the next milestone. Onboarding, moderation, catalog, cart, orders, QR/PIN redemption, refunds, complaints and statistics are implemented and working.

TEAM

Built by the people who **wrote the code**

Abror Khaitboboev

Founder · Software Engineer

Backend and platform architecture. Designed and built the entire microservice system, deployment and CI/CD.

Yandex

Selecty

School 21

Sardor Ali

Product Manager

Product flows, merchant onboarding and moderation process. Partner research and offer quality.

Bank of New York

Deepen

| The platform was engineered in-house, not outsourced — the founding team owns every layer of the product and can iterate on it directly.

ROADMAP

From Tashkent pilot to national coverage

STAGE	PERIOD	TARGETS
Pilot — Tashkent	Months 1–6	Payment provider integration · 100–150 active partners · 10,000+ registered buyers · redemption rate >60% · first NPS
City scale-up	Months 6–18	500+ partners · 100,000+ buyers · promoted placement revenue · repeat-purchase share >30%
National	Months 18–36	Samarkand, Bukhara, Namangan, Andijan · 3,000+ partners · partner self-service analytics · break-even on commission

Figures are management targets, not audited forecasts. Metrics we will publish as we grow: active partners and offers, share of buyers who successfully redeemed, repeat purchases, time from application to publication, resolved complaints, geographic coverage.

Marketing that a micro-business can actually afford

- Makes pay-per-result marketing accessible to the sector producing **over half of national GDP**.
- Moves informal, unverifiable promotions into a transparent process with clear terms, refunds and accountability — **consumer protection by design**.
- Keeps advertising spend **inside the local economy** instead of foreign ad platforms.
- Contributes to **Digital Uzbekistan 2030**: e-commerce penetration, cashless payments and SME digitalization.
